Mating Quality Assessment

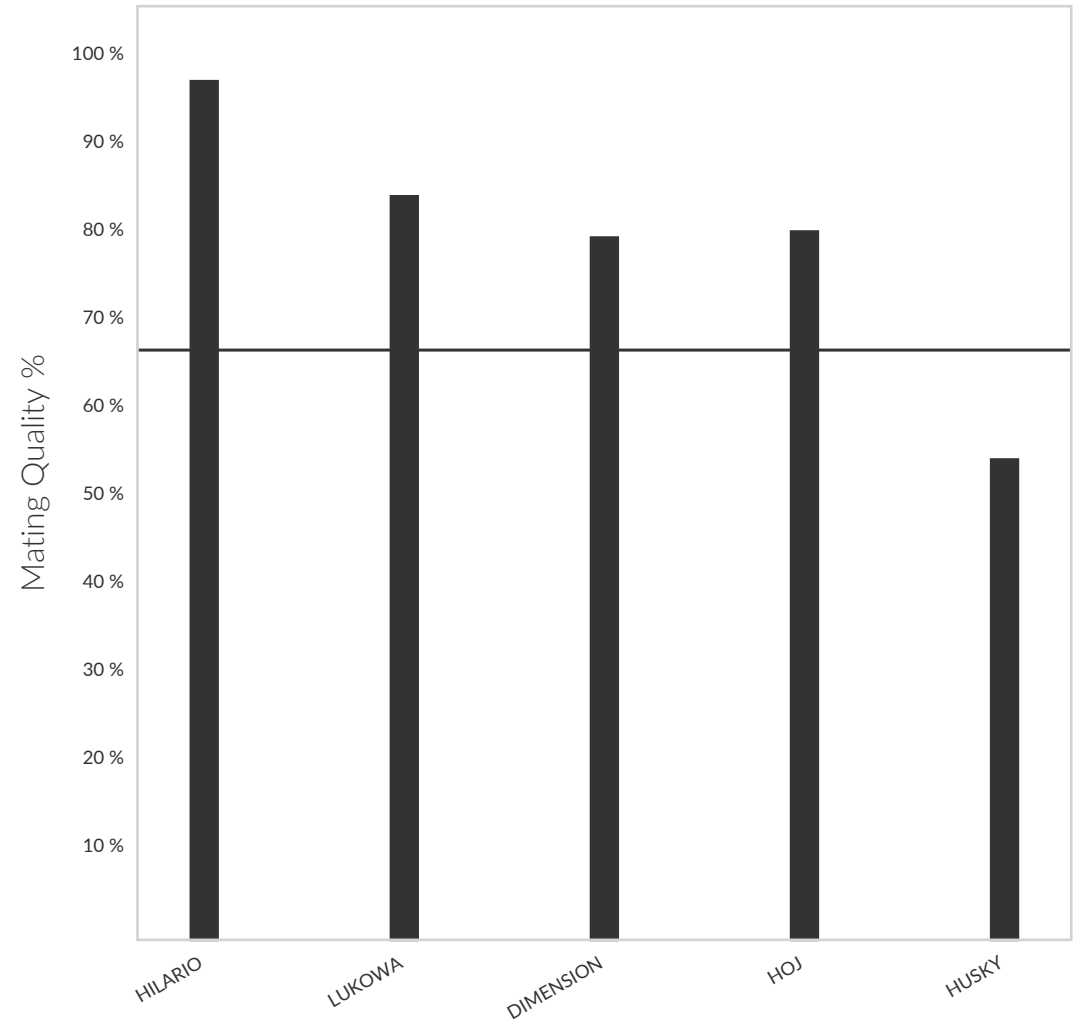

0445530JSE | 22/04/2016

2206/2743

Is the number of high quality matings that could be achieved as a result of the potential sires and the number of matings available per individual sire.

80.4%

The final assessment can be improved by changing the maximum number of matings per individual sire or by omitting and replacing sires that scored a final assessment below 67%.

2736/2743

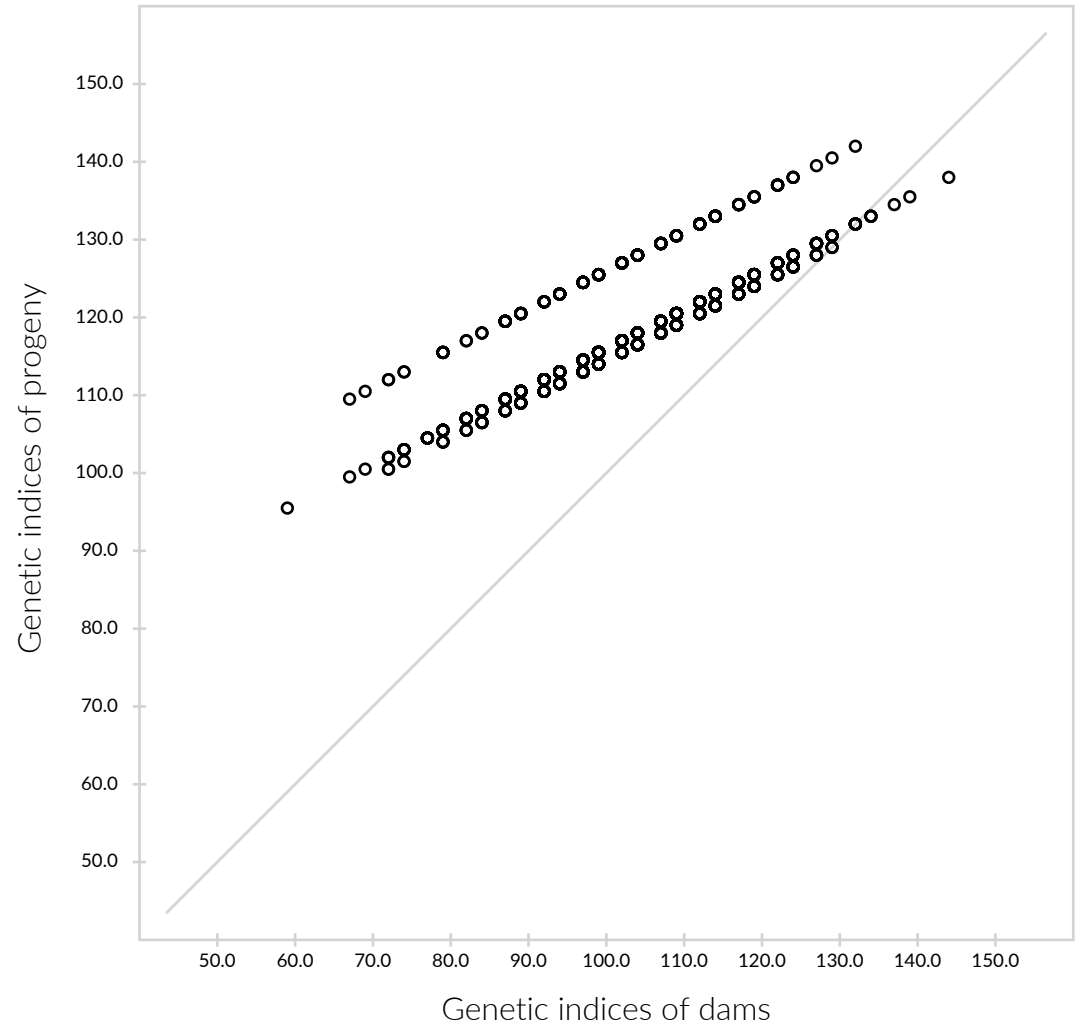

Is the number of animals that were improved (on or above the diagonal) by increasing the genetic merit of expected progeny above that of the dams.

99.7%

Of the progeny will be genetically superior when compared to the potential breeding female animals.

Any improvement above 80% indicates that the potential sires were selected ideally.

Improvement: 104.8 >> 119.1

2101/2743

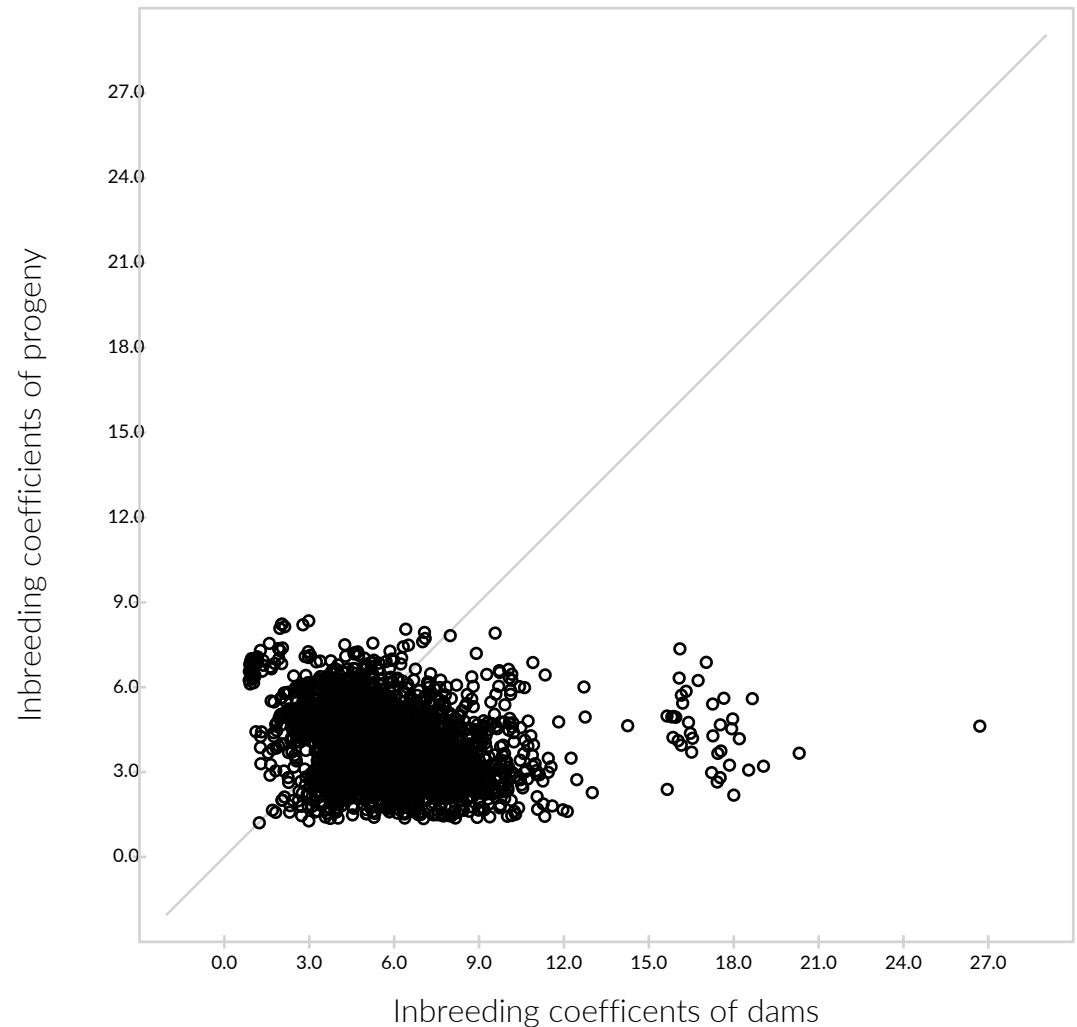

Is the number of animals that were improved (on or below the diagonal) by reducing the inbreeding coefficients of expected progeny below that of the dams.

76.6%

Of the progeny will have greater genetic variation when compared to the potential breeding female animals.

Any improvement above 70% indicates that the potential sires were selected ideally.

Improvement: 5.89% >> 4.00%
